Birding

VOL. 36 • NO. 2 • APRIL 2004

In this issue: For more than a century, one of the major emphases of scientific ornithology has been the monitoring of bird populations. Through it all, birders—and before them, “birdwatchers”—have played a key role in monitoring studies, from the pre-Peterson era right up to the modern post-telemetry age of stable isotope analysis. *Our cover image of shorebird biologists at Prudhoe Bay, Alaska, was photographed in June 1991 by © Kevin T. Karlson.*
