

## Sketch or Photo

Common Name Golden-crowned Kinglet  
Latin Name *Regulus satrapa*

Date 10/16/2010 Time 11:30 PM Weather warm 70°F, windy <sup>sunny</sup>  
Location North Shelter belt, 2122 Eagle Rd., Lehigh

Notes Kansas,

Notes: Saw a small wren-sized bird foraging and flitting around in a group of Juniper trees.

It had a bigger bill than a RCKI, and it was a lot darker bill. The wings had a lot more gold-yellow than RCKI do.

Its belly and undertail coverts were pure white. It had a distinctive "gold-red" crown. Its song was like a chickadee and its song was a high pitched "tsee-tsee".

After a few minutes 5-6 more showed up calling and chattering.

Also saw:

RTHA, 1 "Kridler's"

TUVU, 6-7

AMCR, 3

YRWA, 8

DEJU, 2
